OVERVIEW

A patented fall protection harness developed for a broad spectrum of fall protection requirements. The design of the harness and the adjustable shoulder straps provide optimal user fitting in terms of size and comfort.

The patented attachment webbing loops are located at waist height to keep the lanyard/rope out of the way as much as possible, and to give the user a free field of operation. In the event of a fall the loops move up to the chest providing a high attachment point, positioning the body correctly in a fall.
